

Environmental Policy

Austral Business Machines positively contributes to the improvement of the environment by practicing and exploring ways to reduce our environmental impact as a business and as a provider for our clients.

Reuse and Recycle

-  We have engaged a number of initiative's to reduce waste in the office by recycling cardboard, double side printing and photocopying, scrap paper is used for all internal uses and shredded for packaging.
-  We help our clients recycle by offering to pick up empty toner cartridges and recycle them through the Planet Ark Program.
-  Our Manufacturers participate in this the Planet Ark Program by producing recyclable cartridges.
-  Our decommissioned machines are either refurbished, used for their spare parts or are taken and used for scrap metal.

Sustainability

-  Our building has a large solar system covering the energy we exert and putting excess into the power grid.
-  Our building has tinted windows to reduce the heat produced by the sun and the amount of energy used to cool the building.
-  We supply our clients with products that are environmentally sustainable; with long life technology, low maintenance, double side printing and energy saving capabilities.
-  We have a team of technicians that service the products that we sell ensuring the equipment is running at its optimum level for efficiency and extended life of the machines.
-  Our office is increasingly working towards a paperless environment; the use of Ipad's as offsite workbooks for the technicians and online communication for our clients to request servicing, toners and logging meter reads.
